

Health and Safety

- Canada has one of the most rigorous safety codes in the world for devices that emit radio frequency (RF) energy. Specifically, wireless carriers in Canada must comply with Health Canada's Safety Code 6 - a standard that is comparable to the European Union safety regulations.
- Safety Code 6 was developed and recently updated in March of 2015 by Health Canada as the exposure standard for the regulation of mobile phones, base stations, Wi-Fi and other radio communications emitting infrastructure.
- The exposure limits are the result of thorough and ongoing scientific review and are comparable to similar safety codes in Europe, the USA, Japan and Australia. Safety Code 6 is based on peer reviewed science.
- ISED has made compliance with Safety Code 6 a condition of license for all Canadian wireless carriers.
- TELUS attests that its installation will comply with Safety Code 6 now and in the future should the guidelines change.
